Criteria	Researchers Self-Assessment		RDC Verification	
	Yes	No	Yes	No
Preliminary Pages				
• Title Page				
• Approval Sheet				
• Acknowledgement				
• Dedication				
• Table of content				
• List of tables				
• List of figures				
• Abstract				
General Considerations				
• The paper is written in English. Exception to those phrases in scientific names, Latin or the like and it must be written in Italics. Exemption to Filipino major.				
• The manuscript is in a short bond paper in 12 (Font size) and Carrier New (Font Style) format.				
• The paper is printed in single sided, double space except for the tables and figure titles and table entries.				
• The margin: 1 inch at the left, 0.5 inch on top, bottom and right side of the paper. Pagination is on the lower middle portion of the paper following the format of the institution.				
• Proposal paper is in present tense and full-blown paper is in past tense.				
Abstract				
• The length of the abstract is from 250- 450 words following the IMRAD (Introduction, Methodology, Result and Discussion) format.				
• The abstract is a single paragraph without indentation. Keyword follows the abstract				
Introduction				
• It gives an overview of the study and situates it to the existing research study.				
• It shows the reason of conducting the study and established a foundation that the study is worth investigating.				
• Significance of the conduct of the study should also be stated here in general.				
• Include also the fundamental bases in the conduct of the study.				
• It presented in a coherent manner that will lead your readers to appreciate that there is a knowledge gap in the literature.				
• Your introduction swiftly connected and link logically to the main problem/ objective of the study.				
Conceptual/ Theoretical Framework				
• Presented briefly the theory or the concepts				
• The theory or the concept was/were swiftly related to the objective/ main goal of the study.				

Statement of the Problem					
Stated clearly the problem of the study in general and in specific.					
State clearly what you want to investigate and accomplish so that it illuminates the problem of the study.					
Hypothesis					
The hypothesis(ses) is/are related to the different inferential questions to the statement of the problem.					
Hypothesis(ses) was stated in the null form.					
Significance of the Study					
It indicates the value that was derived from the study					
It describes the contribution of the research to the discovery of information and knowledge.					
Hierarchical arrangement was observed in the listing the different sub-groups who will be benefited from the study.					
Scope and Delimitation					
It includes the inclusion and the exclusion of the study					
It answers the WHs questions looking into the specific definition of what is the study all about, who are the respondents of the study, the locale of the study, when the study is to be conducted and also how are go about the collection of data.					
Definition of Terms					
Defines the terms/ variables used in the study.					
Define all the variables as stated in the domains of the problem.					
Words were defined as how it is used in the study or the operational definition of terms.					
It was arranged alphabetically.					
Review of Related Literature					
The chapter review, summarize and evaluate studies and literature so that the main idea that will be extracted can guide the researchers.					
Study synthesis of all the studies and swiftly present the knowledge gap to support that the present study is necessary to be conducted.					
Logical (thematic) presentation in the chapter					
Theme was based from the variables of the study					
The literature review coincides with the list of reference and to the literature matrix of the study.					
Synthesis of all the related literature was presented in the last paragraph looking into the differences and the similarities of the literature review presented in this chapter.					
Research Design					

It indicates the kind of research to be used for this study (Qualitative, quantitative, experimental, and descriptive or the like).					
Explain the design defining the research design to be utilized and its applicability in the present investigation.					
Respondents/ Participants/ Subject of the Study					
It included and explained specifically the sources of data.					
Include the sampling technique to be used to allocate the number of respondents and explain its applicability to the investigation.					
Specify the rationale of selecting the sampling technique used in the study.					
Data Gathering Tool/ Materials					
Describe specifically the tool, the parts and the manner it will be answered or to be used.					
Explain the source of the data gathering tool.					
Describe in specific the methods of developing the tool, the reliability and validity test and their corresponding interpretation.					
For experimentation, specification of the materials to be used in the experiment is needed.					
Data Gathering Procedure					
specifically discusses the details of the procedures, strategies employed by the researcher/s to gather the data from the respondents.					
Detailed discussion of the processes involve in data gathering is required to enable readers and other researchers to replicate the procedures or methods you did.					
Data Analysis					
The statistical treatment of data is presented for quantitative research.					
The researchers included the discussion of the tool used and its specific used in answering the statement of the problem.					
Presentation, Analysis and Interpretation of Data					
The presentation of the table follows the presentation of the statement of the problem					
Table was presented first and discussion and interpretations respectively.					
In interpreting the data, the general mean was discussed first following the highest and the lowest mean average in the scores.					
Result of the data were given implications and also a backup literature					
The texts and numbers					
The tables were properly labeled					

The tables were reflective of the statement of the problem; the statement of the problem was answered in this chapter					
Summary of findings, conclusions and recommendations					
It briefly gives the salient point of the study considering the sequence of the statement of the problem and it is not a repetition of the previous chapter.					
Conclusion section directly answers the main objective of the study. It captured answer of the main objective of the study briefly stated in a paragraph form.					
the recommendations were based from the result of the study presented in the previous chapter arranged in the coherent manner.					
Appendices					
List of references follows the APA format					
List of references is consistent and reflected to the intext citation in the whole documents					
Sample questionnaire					
Copy of the approved letter					
General statistical table (quantitative)/ transcript (qualitative)					
Curriculum vitae					
Presentation and Communication (during the defense and for RDC/Reviewer use only)					
The research is well-organized and clearly written and presented					
The ideas presented in a logical and coherent manner					
The language appropriate and accessible to a diverse audience					
Note: The reviewer shall check the items marked with “YES” along the reviewer’s point of view and it will be the basis for the verdict of the presentation using the following scheme: 74 points (100%)- accepted with no revisions 49-73 points (90%)- accepted with minor revisions 24-48 points (80%)- accepted with major revisions - Less than 24 points (70%)- deferred
